Project Acceptance 22

This document contains the intellectual property of VisionPoint LLC and cannot be reproduced or distributed in any way without the written consent of VisionPoint LLC.

Newtown Community Center will be referred to as “Client” or “The Client” throughout this document.

VisionPoint LLC will be referred to as “VisionPoint LLC”, “VisionPoint” or “VP” throughout this document.

Executive Summary

Objectives

The objective is to transform the Newtown multipurpose space into a modern, flexible AV environment that enhances presentations, collaboration, and community use through clear audio, seamless video conferencing, and intuitive one-touch control. The design incorporates acoustic optimization and thoughtfully selected, scalable technology to ensure consistent performance in both individual and combined room configurations, while simplifying operation for staff. Overall, this upgrade delivers a reliable, future-ready space that improves user experience, supports a wide range of teaching and meeting needs, and reduces technical complexity for everyday use.

We Build Experiences (How we will deliver your objectives)

- VisionPoint is driven by creating experiences that deliver results for your organization and for your customers
- VisionPoint has developed a preliminary design to specifically address the objectives described above using high quality and reliable technology. We have selected manufacturers and partners based on their reliability and serviceability
- VisionPoint engineers have applied our evidence-based design approach and tools described below to optimize system performance in each space

Project Timeline

To ensure the successful and timely completion of this project, VisionPoint will apply our proven methodology summarized below in the Project Process section. The following key client responsibilities are linear and will be necessary to achieve the desired outcome.

Our Story

Business success hinges on people working together effectively. But limits like distance, time and cost can paralyze an organization's capacity to build valuable relationships internally and externally. Legacy systems, new construction, and mixed levels of technical sophistication make the barriers even higher. At VisionPoint, we create technology-enabled communication environments that free your organization to engage productively with anyone, anywhere. Our solutions are engineered to fit...

- The configuration of your space
- The needs of your organization
- The personality of your culture.

 We think CREATIVELY Our designers, engineers, and technicians, hand-picked for their individual expertise and team orientation, create communication technology solutions that guarantee people remember the seamless interaction, not the technical headaches.	 We stand for SIMPLICITY When it comes to the user interface, simplicity is best. VisionPoint builds systems with intuitive graphics and intelligent operations to elevate the user experience delivering confidence and productivity which translates to a positive return on technology investment.
 We do amazing PROJECTS VisionPoint is proud to design and integrate solutions for organizations of all sizes. Our clients continue to come back to VisionPoint for projects citing the unmatched degree of service received and the high-level system performance.	 Unlike Other INTEGRATORS Unlike other audio-visual technology providers, VisionPoint will only provide right-fit solutions. We don't over-engineer systems!

Core Capabilities

We are driven by creating experiences that deliver results for your organization and customers

BOARDROOMS & CONFERENCE ROOMS

Integrated technology to support presentations, audio conferencing & video conferencing.

DIGITAL SIGNAGE

Digital signage delivers impactful messages and create experiences. VisionPoint designs and integrates video wall technology and if needed brings in content experts for consultation and creation.

SOUND MASKING

Sound masking solutions reduce speech intelligibility to support privacy or to provide better working environments in open spaces.

VIDEO WALLS

Lobbies, Training Rooms, Command & Control centers, and many other spaces leverage video wall technology to deliver high-impact content.

HUDDLE ROOMS

VisionPoint designs intelligent solutions to support the workplace trend of Huddle Rooms and Bring-Your-Own-Device rooms.

ZOOM & TEAMS

Zoom & Teams lead the Unified Communications market. VisionPoint offers expert consultation, design, and integration for Zoom and Teams users, telephony, and meeting rooms.

Partner Services

Based on your needs, VisionPoint can quarterback the overall design by bringing together the appropriate experts, or we can simply put you in touch directly with the service providers of the various disciplines.

CLOUD TELEPHONE SERVICES

Modern UC platforms such as Zoom, Teams, Ring Central and others offer users a wide array of capabilities. VisionPoint brings the service providers to you.

NETWORK

Our clients have access to a wide array of network services including bandwidth, network design and cloud applications.

CYBER SECURITY

Cyber security has become mission critical for all organizations. Through our partner services, our clients have access to experts who specialize in cyber security.

Design Approach

Too many audiovisual technology providers take a one-size-fits-all approach, giving you what they think is best, not what is best for you. Unlike other audiovisual technology providers, VisionPoint designs only right-fit solutions. Simply put, this means our evidence-based designs are based on your specific requirements and are not over-built. Working with industry leading manufacturers, VisionPoint will provide a technology configuration that perfectly fits the way your organization needs to work today while considering possibilities for the future.

Our certified engineers are always researching and testing the latest that the industry has to offer. We recommend solutions from manufacturers who produce quality products backed by top-tier support. This approach contributes to VisionPoint's ability to deliver top-tier support for our clients.

Evidence Based Design

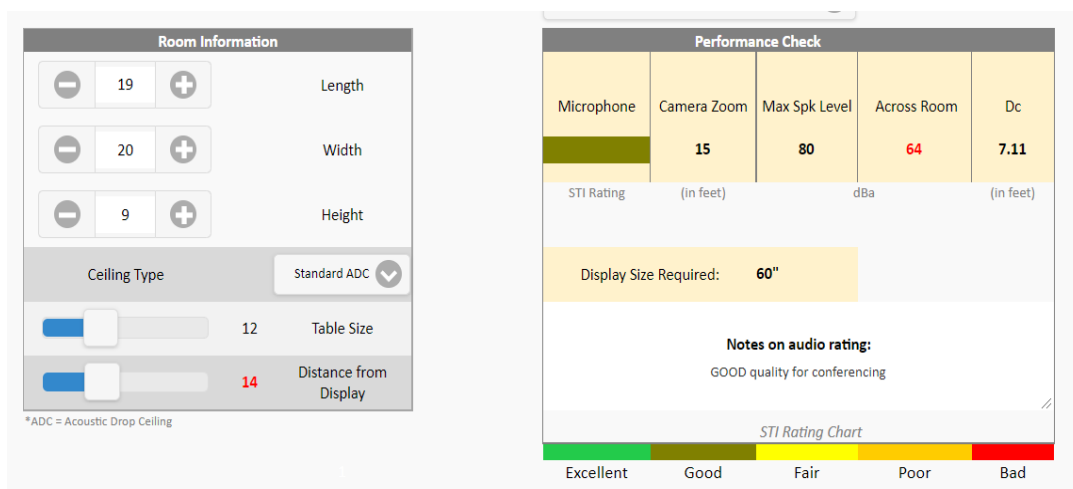

- **Mathematics:** VisionPoint engineers leverage custom-built tools, manufacturers specifications and industry best practices to determine key elements such as field-of-view, reverberance and speech intelligibility, each of which will have a critical impact on the outcome.
- **Know-How:** Know-how is applying the specific knowledge gained by having integrated, tested and programmed the technology. The nuances of how equipment is effectively integrated is not found in the specs from the manufacturer. Know-how is acquired from first-hand experience.

Design & Engineering Tools

VisionPoint leverages an array of custom-built tools to analyze the space itself and to determine how specific technologies will perform in that space

Our custom-built design tools (examples below) answer questions such as...

- How will a specific microphone perform in a particular room?
- Should we add acoustic treatments to the space?
- Will the camera sight lines support the space?
- How will one system perform versus another system?

Service Approach

VisionPoint recognizes the importance of reliability and consistency when it comes to the performance of integrated communication technology. Our clients count on these tools and have come to trust VisionPoint to deliver superior service and support. The costs of poor system performance or over-complicated technology that consume IT resources are factors that all companies should consider when selecting a partner to design, integrate and support their audiovisual and collaboration technology.

VisionPoint offers remote monitoring and management not only to proactively identify and remedy potential system faults before they impact productivity, but also to provide metrics to help our clients with space planning, technology budgeting and business processes.

Certifications

VISIONPOINT IS ONE OF A SELECT GROUP OF INTEGRATORS IN THE USA TO BE NAMED AN APEX AV PROVIDER OF EXCELLENCE. WE ARE ALSO A WOMEN-OWNED BUSINESS.

VisionPoint maintains certifications with Avixa, the AV industry's premier association, as well as many key manufacturers. The following is a partial list of our industry and manufacturer certifications.

Statement of Work

Rooms in Scope and Capabilities Matrix

Community Center

User Experience

The multipurpose room will include integrated technology to support presentations, video conferencing, and livestreaming. The AV upgrade will enhance the user experience with improved acoustics, high-quality projection, flexible wired and wireless content sharing, professional audio reinforcement, multi-camera coverage, Google Meet integration, and intuitive touch-panel controls, creating a versatile space that supports both in-person and remote collaboration whether configured as a single room or a combined event space.

Acoustics

- (15x) 16"x48"x2" wall-mounted acoustical panels will be installed throughout the space to meet industry standards for speech intelligibility.

Display & Presentation Technology

- A new 10K lumen short-throw projector will be installed below the drop ceiling 6-8' away from the existing OFE projection screen.
- An HDMI wall-plate will be installed on the projection screen wall for wired presentation.
- Wireless presentations will be available through a wireless sharing device.
- Display and presentation technology is only capable in Multipurpose 3 (170) or in a combined state.

Video Conferencing Technology

- This will be a Google Meet room supported by a dedicated compute running Google Meet software. (5x) PTZ cameras will be installed in the space for videoconferencing and live streaming. All five cameras will be manually controlled and switched through the Crestron control panels. Google Meet meetings, cameras and live streaming can take place in Multipurpose 3 (170) or in a combined state.
 - (2x) PTZ cameras will be mounted on either side of the projection screen for optimal viewing angles of the audience.
 - (2x) PTZ cameras will be mounted on each long wall to pick up end-users in a U-shaped or boardroom style table orientation.
 - (1x) PTZ camera will be presenter facing and will pick up the front of Multipurpose 3 (170) by the projection screen.

Audio Technology

- (12x) Gooseneck, (2x) handheld, and (2x) lavalier wireless microphones will be used for speech reinforcement and videoconferencing in Multipurpose 3 (170) or in a combined state.
- The OFE ceiling speakers and amp will be reused.

- New speakers and amp can be added as an alternative. Existing ceiling tiles may need to be replaced if the existing speaker cutouts are larger than the new speakers specified.
- Each room will receive a Bluetooth wall-plate. In a divided state, the Bluetooth receiver in each room will send audio to only the speakers in that room. In a combined state, any Bluetooth receiver can be connected to play audio through all the speakers in the space.

Control Technology

- (3x) 10-inch wall-mounted touch panels will be installed for facilities controls, one in each room, with a custom interface to include:
 - Camera controls (170 or combined only)
 - Source selection (170 or combined only)
 - Volume/mute controls
 - System on/off
 - Live Streaming start/stop (170 or combined only)
- An additional wireless touch panel will be included that will mirror the above touch panel functionality.
- A wall-mounted touch panel will be installed in Multipurpose 3 (170) with a native Google Meet interface to join scheduled or ad-hoc meetings.
- Partition sensors will be installed to automatically divide/combine each room system.

Installation Infrastructure

- A new full-sized rack will be installed in the existing rack location. The existing rack and hardware will be removed and provided to Town of Newtown.

Client responsibilities

- Low voltage cable pulls
- Google Meet licensing
- Calendar integration
- Uninterrupted access to the space during installation and testing
- Livestreaming configuration (Youtube/Vimeo)

AV Network

This design is based on creating an AV network that will leverage a subnet on your organization's production network. As part of VisionPoint's design and engineering services, we will create a network diagram illustrating the network architecture. The network diagram will require validation and sign-off by Newtown Community Center.

Assumptions

This proposal is based on the following assumptions:

- All work to be performed by others as identified in the Responsibility Schedule below will be completed before the start of VisionPoint's scheduled on-site installation
- Work will be performed on consecutive days Monday through Friday from 8:00 AM to 5:00 PM
- All required permits will be provided by others

Owner-Furnished Equipment (OFE)

Any equipment supplied by the Client for use in this project will not be covered under the warranty and may require additional charges to test and recertify prior to installation.

Project Process

VisionPoint's process is based on a proven approach to deliver successful outcomes. A dedicated project manager will direct all communications, logistics and coordination with the entire project team.

Project Kick-Off

VisionPoint will schedule a kick-off meeting to...

- Introduce the team and communication portal: myavproject.com
- Review Roles & Responsibilities
- Review the design, capabilities, and network diagram

Engineering & Drafting

Once the AV network diagram has been validated and approved, VisionPoint engineers will work to...

- Create a drawing package appropriate for your project
- Order all equipment
- Complete pre-installation quality control

Fabrication & Configuration

Upon receipt of the equipment at VisionPoint, our team will...

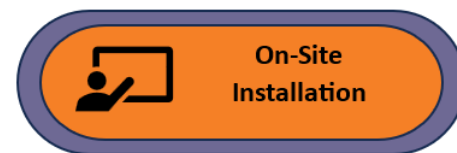

- Build, wire, configure, and program your system
- Stage your system as a complete working assembly
- Test all operations and prepare the equipment for delivery to your location

Room Ready

Before on-site Installation, each space must be ready. VisionPoint will provide a client responsibility checklist which must be approved for the project to proceed. This phase validates that all client and contractor tasks have been completed, including:

Power, data, AV cabling, hardpoints, network, licensing, furniture

On-Site Installation

The VisionPoint on-site team consists of a lead engineer, technicians, and a quality control engineer. VisionPoint's team will work to...

- Professionally install all equipment according to the design
- Commission (QC) the system and fine-tune the audio profile
- Conduct training and provide training documentation

Project Close

After the system has been turned over to you, VisionPoint will schedule a project close out meeting to...

- Review the project outcome and survey
- Introduce the VisionPoint service team

Change Management

The goal at the outset of any project is to complete it as efficiently as possible. To manage any unforeseen situations or if the client elects to change something, VisionPoint will provide documentation describing the change, how it impacts the operation of the system and any associated increases or decreases to the project cost.

Project Services

VisionPoint's Design and Engineering services provide the necessary documentation to coordinate the architectural environment with the installed technology. Our project management services will coordinate between all disciplines involved in the construction process related to the integration of the technology. We will attend pertinent meetings with the design team during the construction phase to ensure proper coordination of the technology and base building requirements. It is our intention to blend the required functionality with the aesthetic appeal of the environment in conjunction with the design team.

Project Management

- Should your Project Manager, General Contractor or Architect conduct project meetings, VisionPoint will attend those specifically pertaining to audiovisual technology design or integration.
 - Attendance will be via audio or video conference

Design, Engineering & Consulting

- Design meetings with you, your staff and people associated with the organization's technology requirements. After the project kick-off meeting, up to three (3) design development virtual meetings are included in this project
- Client needs analysis of each area to define the business and technology requirements to support the respective areas
- Develop initial drawings to review functionality with your project team
- Analyze floorplans, elevations and reflective ceilings that introduce technologies that require aesthetic implementation
- Discussions with architect to review aesthetic implementation of equipment into the presentation/communication environments
- Engineering review/recommendations regarding table perforations and cable management systems to accommodate your presentation requirements
- Cable management suggestions related to integrated table technologies

Documentation

Prepare preliminary documentation of specifications for construction purposes. This may include the following:

- Display locations and associated details in each room
- Elevations of each room.
- Reflective ceiling plan for each area impacted by technology.

- Conduit and cable riser plan.
- Lighting review with recommendations on zoning and interface controls.
- A viewing profile establishing image size and screen locations for Rules of Legibility concerning computer generated text documents and video.
- Identify camera locations where applicable for presenters and audience participation.
- System flows encompassing video, audio and control flows and component connectivity for review with the client's team
- Electronic drawings which include floor plans, elevations, reflective ceiling, conduit, details and cable pull schedule with responsibility scheduling delineating overlap in any construction disciplines
- Equipment and mounting detail information related to technology
- Drawing details locating critical equipment within the architectural package
- Documentation provided for the project will include conduit riser and junction box schedules, standard details, and electrical requirements. Drawings and submittals will be provided to the construction team for incorporation into a single construction package
- Revisions: Minor revisions to the drawings that do not impact the overall design or equipment selection are included in this project. Major revisions such as changes to the original CAD backgrounds provided by the architect or changes to the overall design and equipment selection may result in additional charges

Critical Coordination Items – User Experience

- Design and review touch screen control panel layouts to ensure they meet the functionality of the primary users of the technology for operational efficiency.
- Review and recommend seating configurations for appropriate viewing angles based on the types of meetings being conducted within the space
- Provide integrated computer and network connectivity insuring proper cable management and client accessibility
- Review the type of lighting controls and lighting equipment specified by the engineering firm to assure zoning will allow for the flexibility required for meetings and presentations

Installation & Training Services

VisionPoint provides certified industry specialists for every service in our current offering. We offer our clients the highest quality service in the industry leveraging our certified field service engineers. VisionPoint will provide installation services to integrate the equipment, modify remote control programs to enable connectivity to the new systems, test and train the client on utilization.

Quality Control

VisionPoint bases its reputation on the ability to provide “Certified Knowledge” and Immediate Response to our customers’ needs. Our staff has over 100 years of experience in the industry providing integrated communication and collaboration technology solutions.

VisionPoint’s quality control process is modelled after the ACE (Achieving Competitive Excellence) program for continuous improvement. Our processes include both in-house and on-site quality control (QC) phases by our dedicated QC engineers. This ensures that prior to the hand-off to your organization, the equipment design and operation are independently evaluated and tested by an engineer other than those who built the rack and installed the systems.

Training

Upon completion of the installation, VisionPoint will conduct an initial end-user training to meet the specific applications of your systems. This on-site training will follow the guidelines provided in the user documentation for each operation of the system. After completing the initial end-user training, attendees will:

- Understand the capabilities of each area and its intended application
- Understand how to use the touch panels or other controls
- Access the VisionPoint provided instructional documents

Systems Turn-Over

VisionPoint will notify the Client when systems are ready for general use. Until that time, the systems will not be available for use and no events or meetings should be scheduled in the room(s).

Project Timeline

The timeline for this project will be coordinated based on the overall project schedule, coordination with other disciplines and equipment lead times. As part of our project management services, VisionPoint will provide a schedule of milestones identifying both the pre-installation work and on-site work. We will identify the expected duration of the on-site work, which will be required to maintain regardless of the overall project schedule. For example, if the project requires one week of on-site work, this duration must be maintained even if the overall project schedule has contracted.

Responsibility Schedule

This preliminary responsibility schedule summarizes the supplier and installer of the major components, supporting infrastructure or service associated with this project. The final responsibility schedule will be included as part of the design and drawing package.

VisionPoint Service and Support

VisionCare

This agreement includes *VisionCare*, VisionPoint's comprehensive service and support plan. VisionCare will begin 45 days after equipment ordering and extends for one year.

VisionCare includes:

- Full service and support for any issues that arise from VisionPoint's workmanship, design, or system configuration.
- Repair or replacement for equipment furnished and installed by VisionPoint
- VisionPoint professional services associated with repair or replacement of equipment

VisionCare excludes:

- Owner application or network configuration
 - Examples: Office 365, Cisco CUCM, Zoom Admin Portal
- Owner-furnished equipment
- Consumable items such as lamps and batteries
- Acts of nature
- Equipment that fails due to firmware updates that are not coordinated or managed through VisionPoint
- Equipment failure due to...
 - Improper ventilation/cooling
 - Cyberattacks
 - Misuse or abuse

During the warranty period, VisionPoint will diagnose the problem over the phone or through remote access and take appropriate action to remedy the issue as quickly as possible. If the issue cannot be resolved immediately over the phone or through remote access, VisionPoint will dispatch a Service Engineer.

Should equipment fail during your warranty period, VisionPoint will repair or replace the component based on the inclusions and exclusions described above. In the event a component must be removed from the system, VisionPoint will, if requested, make every reasonable attempt to provide a temporary replacement of equal functionality. Replacement equipment may not be an exact replacement but will keep the room substantially operational until the replacement is available.

UnifyPlus Workplace Management

VisionPoint's UnifyPlus is an enterprise-grade software platform for managing and controlling connected workspaces. This hardware-agnostic platform revolutionizes productivity for end-users and enables advanced services for users and VisionPoint service personnel.

The UnifyPlus platform provides the ability to manage the status and health of your estate and gain deep analytical insights to make data-driven business decisions all while reducing the total cost of ownership and improving the agility, productivity and user experience of technology deployments.

UnifyPlus bridges the gap between people, workspaces, and technology by delivering the following key benefits:

-  Remote Monitoring, Alerts and Reporting
 - Monitor devices, rooms, systems, connectivity status and usage in real time
 - Minimize business disruption
 - Understand how meeting rooms and technology are used
 - Optimize future real estate and technology spends
-  Management and Provisioning
 - Perform bulk provisioning and firmware updates to all devices across the enterprise
 - Increase efficiency and quality of collaboration technology
-  Automation
 - Schedule automatic "room checks" to eliminate manual processes and enhance operational productivity
 - Improve the overall user experience

During the warranty period, VisionPoint will actively and remotely monitor key performance attributes on your system enabling our team to proactively diagnose and remedy system faults before they impact user experience and productivity. Remote Monitoring notifications are tracked by our technical services team within our Network Operations Center (NOC)

VisionPoint will be able to control or view the status of any appropriately connected technology and alert you or your team via phone or email. Remote Monitoring will enable VisionPoint to know what has changed and how to resolve the issue, prior to user experiencing frustration with the operation of the system. This service improves client satisfaction and client productivity. If applicable, VisionPoint will provide an application for your IT team that will emulate the control interface of each conference room, enabling remote control from their own networked computer.

Terms & Conditions

1. General

- a. Construction or project delays that are outside of VisionPoint's scope or control shall not impact the payment terms defined below.
- b. All pricing is valid for 14 days.
 - i. As part of the normal project process, there will be a period of time between when this agreement is executed and when the equipment is ordered. In the event of a product cost increase from the manufacturer after this agreement is executed but before VisionPoint has purchased the product, VisionPoint may issue a change order to cover the cost increase from the manufacturer.
- c. Any additions or modifications to scope of services described in this proposal will require a separate quoted and written change order.
- d. No modification or waiver of the provisions of this proposal shall be valid or binding on either party unless in writing and signed by both parties. No waiver of any term, right, or condition on any subsequent occasion or a waiver of any other term, right or condition hereunder.
- e. This agreement will in all events and for all purposes be governed by, and construed in accordance with, the laws of the State of Connecticut, without regard to any choice of law principle that would dictate the application of the law of another jurisdiction.
- f. Project delays greater than thirty days from the agreed scheduled installation date caused by the customer or customer's contractor, such as furniture or construction delays, are not the responsibility of VisionPoint. The customer will be responsible for any storage fees incurred and the payment schedule and warranty period will remain according to the original agreed upon installation date.
- g. The client shall provide uninterrupted access to the area of work for the duration of the scheduled installation period. Interruptions of the scheduled installation period may result in additional charges.
- h. For projects that involve modifications to programming code, the client shall provide the uncompiled code for use and modification by VisionPoint. Should the uncompiled programming code not be available, additional charges may apply.
- i. Graphical User Interface and Programming Control Code: If applicable, VisionPoint will develop a graphical user interface for easy operation of the integrated communication technology. The programming code is designed and licensed specifically for the environment/room(s) described in this proposal. VisionPoint will provide the client with the uncompiled programming code, which will allow access to the program for future modifications including component changes with the space. The programming code cannot be copied and utilized in another environment or processor, without the consent and approval of VisionPoint LLC.
- j. For projects that require CAD drafting, the client shall provide VisionPoint with architectural plans (CAD or PDF). Additional charges may apply in the event architectural plans are not available from the client.

2. Payment

- a. 50% invoiced upon client approval of this agreement; 40% invoiced upon delivery of drawing package to client; 10% invoiced upon completion of customer training.
- b. All invoices due 30 days from invoiced date.
- c. Any applicable state sales tax will be added to invoices.
 - i. VisionPoint LLC is registered to collect sales tax in the following states: Connecticut, Massachusetts, Rhode Island, New York, New Jersey, Washington DC, California, Florida & Texas.
 - ii. If products or services are provided to any of the above-named states, applicable sales tax will be invoiced, unless a Direct Pay Permit is provided. Please provide any special permits for state approved reductions/exemptions in sales tax.
- d. Sales tax needs to be self-remitted (Use Tax) for any state VisionPoint is not registered to collect sales tax.
- e. Any applicable trade tariffs will be added to invoices.
- f. This agreement includes an estimate of freight charges. Freight charges will be payable by the customer and will be included on invoices.
- g. Accounts not paid within terms are subject to a 1.5% monthly finance charge.

3. Confidentiality

- a. During the course of fulfilling obligations hereunder, VisionPoint LLC may be given or observe certain trade secrets, technical know-how and other confidential information. VisionPoint LLC agrees: (i) to hold all Confidential Information in confidence; (ii) not to disclose Confidential Information to others; and (iii) not to use Confidential Information for any purpose other than to fulfill the obligations of this Agreement.

4. Relationship of the Parties

- a. The business relationship of the Client and VisionPoint to the other is that of an independent contractor and not a partner, joint venture, employer, employee or any other kind relationship. VisionPoint and Client will be solely responsible for expenses and liabilities associated with the employment of its employees.
- b. This agreement and the rights and obligations hereunder may not be assigned or transferred to either party without the prior written consent of the other party.
- c. This agreement sets forth the entire agreement and understanding between parties, superseding any and all previous statements, negotiations, documents and understandings, whether oral or written.

5. Non-Solicitation

- a. The Client shall not interfere with the employment relationship between VisionPoint and any VisionPoint employee with whom the Client may come in contact in connection with this Agreement and shall not employ such VisionPoint personnel for a period of at least one (1) year from the termination of this Agreement without VisionPoint's prior written consent.

6. Limitation of Liability

- a. VisionPoint shall not be liable for: (i) special, incidental, indirect or consequential, damages including, without limitation, damages resulting from delay of delivery or loss

of profits, data, business or goodwill, whether or not Client has been advised or is aware of the possibility of such damages, or (ii) any claim that was discovered more than one (1) year prior the institution of suit thereon.

- b. VisionPoint acknowledges that Client shall bear no liability for (i) bodily and/or personal injury or death or property damage caused to VisionPoint or others by VisionPoint in the performance of the services, (ii) work-related medical expenses or injuries sustained by VisionPoint in the performance of the services, or (iii) any professional liability of VisionPoint.
- c. Neither party will be liable to the other for failure to perform its obligations hereunder if and to the extent that such failure to perform results from causes beyond its control, including and without limitation: strikes, lockouts, or other industrial disturbances; civil disturbances; fires; acts of God; acts of a public enemy; compliance with any regulations, order, or requirement of any governmental body or agency; or inability to obtain transportation or necessary materials in the open market.
- d. VisionPoint represents and warrants that VisionPoint, including its officer, directors, employees and independent contractors (i) are not excluded, debarred, or otherwise ineligible to participate in federal health care programs (as defined in 42 U.S.C. §1320a-7b(f))(the “federal healthcare programs), (ii) have not been convicted of a criminal offense related to the provision of healthcare items or services and have not been excluded, debarred, or otherwise declared ineligible to participate in the federal healthcare programs, and (iii) are not, to the best of its knowledge, under investigation or otherwise aware of any circumstances that may result in exclusion from participation in the federal healthcare programs. This shall be an ongoing representation and warranty and VisionPoint immediately shall notify the client of any change in the status of its representations and warranties set forth in this section.
